

Cat[®] Tri- and Quad-Link Tracks

Improved undercarriage strength in severe impact conditions

Tri- and Quad-Link tracks were developed by Caterpillar for the most severe impact conditions including forestry. Their unique designs improve link assembly strength by bolting additional outrigger chains (1/2 chains) -one for Tri-link and two for Quad-link- to the outer ends of the track shoes. The outrigger chains greatly improve sealability and structural integrity by stiffening the track system and reducing shoe deflection. Using Tri- or Quad- Link track leads to :

- better load distribution
- improved lubricated joint life (fewer dry joints)
- greater system reliability

The result is lower undercarriage cost per hour in high impact applications.

Cat® Tri- and Quad-Link Tracks

Customized track solutions

Tri- and Quad-Link tracks are your best value if you operate in the most severe impact applications. By bolting one or two outrigger chains to the shoes, Tri- and Quad-Link tracks distribute working loads more evenly, reduce the number of dry joints, and improve undercarriage system reliability.

Our parts and service representatives can analyze your application and tell you if Tri- or Quad-Link Track can improve your undercarriage wear life—and lower your cost per hour. We can also help you manage your undercarriage system.

Tri-link Track

Tri-link track has an additional outrigger chain bolted to the outside of the track shoe. This track is best suited for machines that must operate in both high and low impact conditions. It is a lower cost alternative to Quad-link track. It is your best option if you are not continually exposed to the most severe impact conditions but have poor sealability due to problems with pin and bushing retention.

Quad-Link Track

Quad-Link track has two additional outrigger chains added to the sides of the shoe. This track is recommended for the most severe high impact conditions like logging (skidding), stumping, work in rocky terrains, or any application where the potential for shoe deflection is high.

Cat® Tri- and Quad-Link Track Availability

Tri-link Track	Model	Quad-link Track
X	D5N/D5M/D4H LGP	X
X	D6N/D6M/D5H LGP	X
X	D6T/D6R/D6H LGP	X
X	517 Skidder	X
X	527 Skidder	X
X	D4H Custom Skidder/TSK	X
X	D5H Custom Skidder/TSK	X

Additional machine models may be included, ask your Cat Dealer for availability.

TRI-LINK TRACK

QUAD-LINK TRACK

Quad-link track adds strength essential for superior undercarriage life in the most severe applications.

1. Heavy Duty or Conventional Sealed and Lubricated Track Center Chain

2. Unsealed Outrigger Chains

CAT® DEALERS DEFINE WORLD-CLASS PRODUCT SUPPORT.

We offer you the right parts and service solutions, when and where you need them.

The Cat Dealer network of highly trained experts can help you maximize your equipment investment.
