

Cat® Wear Protection Products

Protect Machines and Buckets in a
Variety of Environments and Applications

Tough Machines Need Tough Protection

Cat® machines are built for years of use. New wear protection parts - chocky bars, wear buttons, roll bars and wear blocks - protect machine and bucket surfaces from wear, maximizing productivity and uptime.

Each part features two layers, which are bonded together through a copper-brazing process.

- Chrome White Iron (CWI). Heat-treated ASTM Class 2, Type B with a minimum hardness of Rockwell C 60 for high wear resistance
- Mild-steel Backing Plate. Provides impact absorption for greater durability

Increased Protection for Machines and Buckets

Cat® wear protection products have been designed to protect more expensive components, such as machines and buckets, resulting in less downtime and greater productivity. The wide variety of product designs and sizes allow for maximum wear protection in virtually any type of environment or application.

Chocky Bar

This distinct shape conforms to a variety of surfaces and applications. The "V-groove" design allows the bars to be bent around a side-bucket profile or separated to meet different length requirements.

Wear Button

Four different sizes let you choose the right "tri-bar" design to protect your machines and buckets.

Wear Block

Extreme applications call for extreme protection. Cat wear blocks offer a thicker profile for extended wear life. The zigzag design reduces wear found in parallel-channel products.

Roll Bar

The leading edge of a machine takes a lot of punishment. Roll bars provide maximum protection while minimizing wear as the edge moves through the material. They also deflect impact, improve material penetration and weigh less than other options.

Bolt Protectors

Designed to provide maximum protection to hardware and retention components, Cat bolt protectors are welded around the components to protect them from wear. Chrome white iron and a mild steel backing plate combine with a uniquely engineered design to provide an effective solution for a wide range of environments.

Benefits of Wear Protection

The purpose of wear protection products is to provide material-on-material wear resulting in longer life, greater uptime, and increased productivity.

Cat GET Warranty

Caterpillar warrants most ground-engaging tools against breakage during normal operation. If a piece of Cat GET breaks, Caterpillar will replace it at no charge. See your dealer for complete warranty details.
