

Cat® Reman Underground Mining

Reliability. Availability. Affordability.

Cat® Reman is expanding coverage of remanufactured Drive Train (DT) components for Load Haul Dumps (LHDS) and Underground Mining (UGM) Trucks. When your UGM equipment requires service, you need reliable and affordable repair options that get you back to work quickly.

Cat Reman UGM DT components are factory-remanufactured, using genuine Caterpillar parts, and include all critical engineering updates. Each remanufactured component is tested extensively to ensure same-as-new performance.

Cat Reman options are one more way we support your mining machinery and help you lower owning and operation costs. See your Cat Dealer for the broadest remanufactured parts and component coverage in the industry, supported by Caterpillar worldwide inventory and distribution system.

Good for Customers. Good for Business. Good for the Environment.

Exchange Process is Quick & Simple

The core acceptance inspection process for exchanging a Cat® Reman DT component is fast and easy. Only a visual inspection of the core is required to check for:

- Acceptable Part number
- Full, complete assembly or component
- Broken or missing components (broken housing, etc result in partial core credit; consult Reman core criteria for details).
- Damage due to fire or mishandling

Fully Tested Components Perform Like New

Cat Reman DT Components deliver like-new performance because they're remanufactured, not just rebuilt or repaired. Each remanufactured DT component is rigorously tested to ensure it's reusability and that it meets factory specifications of new components.)
